

The Flight Head Mini 4 is a lightweight stabilized remote head made from carbon fiber that is still robust enough to carry a wide range of full-size camera packages. Perfect for static and dynamic shots, FHM4 delivers an amazing performance while eliminating camera shakes and vibration during fast or rough moves. It can be mounted on any type of moving platform: camera crane, dolly, cable cam, quad, motorbike and adapts quickly to awkward spaces, ensuring flexibility and stability for every shoot. Ergonomic control via the joystick console, handwheels, or pan bar allows precise positioning and creative camera movements.

SPECS
